

EMT Universal Fittings Kit

emt
Insulating Gas
Analysis & Handling

Handling insulating gases securely and efficiently is essential to maintaining their condition for operational use and testing, and to ensuring the safety of maintenance personnel.

Degradation of insulating gases is commonly caused by contaminants introduced through leaking hardware or connections.

Having the right fittings not only increases maintenance efficiencies, but also minimizes downtime during insulating gas filling and tests operations.

To assist maintenance personnel, EMT have developed Universal Fittings Kits, which supports productivity and efficiency, whilst promoting best practice and quality when working with insulating gases. The EMT Fittings Kit provides a simple and cost effective alternative to managing a large inventory of multiple kits and excess fittings.

Secured in a pre-engineered, protective case for ease of handling, use and storage; the toolbox contains a range of fittings, regulators, hoses, and tools including; two high quality spanners, a selection of cleaning brushes, PTFE sealing tape, degreasing wipes, and storage of sampling hoses in the kit lid.

Supplied with stainless steel fittings which connect to various manufacturers' breakers including ABB, Siemens, Alstom and GE; the toolbox facilitates a pick 'n' mix of additional/custom fittings and connections, which can be purchased from EMT's extensive range of fittings, regulators and hoses.

EMT Fittings Kits are flexible to meet current and future industry needs.

For more information or a demonstration contact sales@emt.global or visit www.emt.global

Fittings

EMT work on the principle that if you use our equipment we want to ensure you get the best quality measurements every time. Reliable and robust, our extensive range of stainless steel and brass fittings are the benchmark in safety, efficiency and performance for gas filling and testing. EMT offer the best connections in the industry and the right fit for any gas compartment. Contact us with your fitting requirements - custom fittings and connections available on request.

Regulators

EMT offer high purity regulators for all gas applications, meeting gas service and delivery pressure requirements for routine switchgear maintenance. Our range of cylinder regulators deliver safety and performance during insulating gas filling and testing, for reliable, leak-free monitoring and control, and contaminant-free gas transmission every time.

Hoses

EMT hoses guarantee pressure-tight, leak-tight filling and evacuation of insulating gas compartments. Fitted with self-sealing valves and couplings, our range of hoses ensure the safe handling and operation of any insulating gas.
